

=====

Spring Batch

=====

=> Spring Batch is a lightweight and powerful framework for processing large volumes of data.

=> It is robust framework designed for building batch processing applications in Java.

=====

What is Batch Processing?

=====

=> Batch processing involves executing a series of automated jobs, it involves:

- 1) Reading large volumes of data
- 2) Processing data in chunks
- 3) Writing processed data somewhere (ex: file, database etc..)

=====

Batch Processing Real-time Usecases

=====

- 1) Sending Bulk Msg and Bulk Email to Customers
- 2) Sending salaries to all employees in a company
- 3) Sending Bank Account Statement to Account Holders
- 4) Sending bill payment reminder to credit card holders
- 5) Sending Insurance or Medical Plan Renewal Reminders
- 6) Read Millions of records from File then process it and store in database.

=====

Spring Batch Module Key Concepts

=====

- 1) ItemReader
- 2) ItemProcessor
- 3) ItemWriter
- 4) Step
- 5) Job
- 6) JobLauncher
- 7) JobRepository

ItemReader : It is used to read data from the source

ItemProcessor : It is used to process the data

ItemWriter : It is used to write the data to destination

Step : It represents sequence of our batch execution (reader + processor + writer)

Job : It is used to represents set of steps for batch processing

JobLauncher: It is used to start the job exeuction.

JobRepository : To maintain job execution history and steps info
